

# Robin Cloud Native Storage for Microsoft Azure Kubernetes Service (AKS)

## Application-aware Storage and Data Management for all Stateful Applications

Robin Cloud Native Storage (CNS) brings advanced storage and data management capabilities to Microsoft Azure Kubernetes Service (AKS), Microsoft’s fully managed Kubernetes service. Robin CNS seamlessly integrates with Azure Disk Storage to simplify management of stateful applications.

Developers and DevOps teams can deploy Robin CNS as a standard Kubernetes operator on AKS. Robin Cloud Native Storage helps simplify data management operations such as backup/recovery, snapshots/rollback, and cloning of entire applications (data+metadata+config), providing enterprise-grade data protection. Robin also ensures stateful application portability across AKS and Kubernetes running on-prem or in any cloud.

### Robin Cloud Native Storage

### Key Benefits

- **Always-on stateful applications**
- **Improved developer productivity**
- **Faster collaboration across teams**
- **Multi-cloud portability for applications**

### Highlights

#### App-aware High Performance Storage

Robin is application-aware and provides bare-metal performance. All lifecycle operations are performed on the entire application state (data+metadata+ config), not just the storage volumes.

#### Data Protection and Disaster Recovery

Protect the entire application (data+metadata+ config) with snapshots and backups. Cloud backup provides full recovery from application crashes or datacenter disasters.

#### Application Cloning for Fast Collaboration

Collaborate across teams by cloning the entire applications in minutes. Make Dev and QA teams more productive by freeing up valuable time.

#### Hybrid and multi-cloud flexibility

Easily move complex stateful applications between AKS and on-prem and public clouds by running a single command.
