

Robin Cloud Native Storage for Google Anthos

Application-aware Storage and Data Management for all Stateful Applications

Robin Cloud Native Storage (CNS) brings advanced storage and data management capabilities to Google Anthos. Anthos offers a consistent platform for all application deployments, both legacy as well as cloud native, while offering a service-centric view of all environments.

The Anthos platform enables modernizing existing applications, building new ones, and running them on-premises and in the cloud. Anthos is built on open source technologies pioneered by Google—including Kubernetes, Istio, and Knative.

Key Benefits

- **Always-on stateful applications**
- **Improved developer productivity**
- **Faster collaboration across teams**
- **Multi-cloud portability for applications**

Highlights

Native Anthos Integration

Provision and manage stateful applications using container images, Helm, and kubectl frameworks.

Available on Google Cloud Marketplace

Robin is available on the Google Cloud Marketplace. Pay only for what you use with consumption based pricing or try before buying with a 1-month free trial.

App-aware High Performance Storage

Robin is application-aware and provides bare-metal performance. All lifecycle operations are performed on the entire application state (data+metadata+config), not just the storage volumes.

Data Protection and Disaster Recovery

Protect the entire application (data+metadata+config) with snapshots and backups. Cloud backup provides full recovery from application crashes or datacenter disasters.

Application Cloning for Fast Collaboration

Collaborate across teams by cloning the entire applications in minutes. Make Dev and QA teams more productive by freeing up valuable time.

Hybrid and multi-cloud flexibility

Easily move complex stateful applications between Anthos on-prem and public clouds by running a single command.
